## Information for people with hereditary haemochromatosis

The IBTS is providing a free phlebotomy (venesection) service for people with hereditary haemochromatosis in Ireland, **whether or not they are eligible or willing to be blood donors for transfusion purposes.** This service is currently available in Dublin and Cork.

People who wish to use this service must get a prescription from their GP or hospital clinic on the IBTS form - available online at [www.giveblood.ie](http://www.giveblood.ie). This prescription will be good for one year and for up to four phlebotomies within that year.

This IBTS service will provide up to 4 venesections per person per year.

There will be no charge, irrespective of medical entitlement or health insurance cover.

## TO USE THE IBTS HAEMOCHROMATOSIS CLINIC YOU'LL NEED:

- A definite diagnosis of hereditary haemochromatosis by your family doctor (GP) or hospital consultant. This means you will have had a positive genetic test for haemochromatosis at some point;
- To be over 18 years of age; (there is no upper age limit);
- To be fit enough to have your phlebotomy performed outside of a hospital clinic – no serious heart or lung diseases, for example, or no history of strokes or mini-strokes; You must not be under the care of a doctor or clinic for any other condition or disease apart from haemochromatosis except for stable and fairly straightforward conditions such as uncomplicated high blood pressure well controlled by treatment, non-insulin dependent diabetes being treated by oral medication, i.e. oral hypoglycaemics, simple skin disorders or similar.
- A prescription from your doctor or clinic nurse for the phlebotomies, written on the official IBTS prescription form and signed by your doctor or clinic nurse:

### **No Prescription Form, No Treatment;**

- Adequate veins in your arms to have the phlebotomy done with our standard pack – we won't be able to accommodate people with poor veins at the clinic;
- To be able to tolerate a standard 470 ml (about one pint) phlebotomy. If you can't, we'll ask your own doctor to continue to provide your phlebotomies for you;
- Never to have tested positive for HIV, hepatitis C or hepatitis B;
- Not to be a current intravenous drug user;
- Not to be a current sex-worker;
- To be normally resident in the Republic of Ireland.

## YOU DO NOT NEED

To be a blood donor, or to want to be a blood donor, or to be eligible to be a blood donor.

Of course, we want as many people as possible to be blood donors, but blood donation doesn't suit everyone – people who don't feel they want to be donors, or are not eligible to be donors, will still be welcome to have their treatment at this clinic once they meet the conditions listed in the previous section.

# Frequently Asked Questions

## **Will my blood be used for transfusion?**

If you want to be a blood donor, you will have a donor interview, and we will test your blood for transfusion transmissible diseases, and for blood group, in the same way as all donors. We will then arrange for you to get future appointments at the blood donor sessions at D'Olier Street and St Finbarr's. You don't have to live in these cities, but you'll have to be prepared to come to the clinics there.

However for your first visit to the IBTS we will discard the blood we take, whether you are eligible as a blood donor or not.

## **What happens if I don't want to be even considered as a potential blood donor.**

That's not a problem – we are happy to provide the service for people whether they want to be blood donors or not.

## **Why is the IBTS doing this?**

By increasing the access for people with haemochromatosis to free phlebotomy, the IBTS can legally use blood collected from people with haemochromatosis who otherwise would have to pay for the service. For very good reasons, it is against the law to collect blood from people who have a financial reason for donating. So by removing the financial reason, we can safely collect blood from blood donors with hereditary haemochromatosis.

Also, the IBTS is good at taking large volumes of blood from people – we can do it more efficiently and at a lower cost to the public than anyone else. So it's a good thing to do for several reasons.

## **To avail of this service do I require Health Insurance?**

You do not require health insurance to avail of this service.

## **So how do I access this service?**

If you would like to come to the IBTS clinic, ask your doctor or clinic nurse if they think it would suit you – they can look up the information for doctors and clinic nurses on [www.giveblood.ie](http://www.giveblood.ie) if they wish. If they think that you are suitable to come to us, make sure that they give you a signed IBTS prescription form, which will state the number of phlebotomies for us to perform over a twelvemonth period. You will need this form to have the treatment done by the IBTS:

### **NO PRESCRIPTION FORM, NO TREATMENT.**

(You'll need this form renewed every 12 months by your doctor or clinic nurse.)

Then phone to make an appointment - contact either :

- DUBLIN D'Olier street IBTS Clinic 01 474 5000
- CORK St Finbarrs IBTS Clinic 021 480 7400

You won't have to wait more than 3 months for your first appointment, or for any subsequent appointment. We expect the waiting time for the first appointment to be much shorter than three months at all times, but it will depend on demand for the service.

## **What happens if I can't make it for my appointment?**

If you call the clinic beforehand, we will reschedule you for a time as close as possible to the original date. If you just don't show up, you can call us later to reschedule. We'll do our best to accommodate you as soon as we can. However if you don't show without having let us know more than a couple of times, we'll ask your own doctor to resume your care. This service may be free to the public, but we need to use the public resources as efficiently as we can.
